Daniel Le Grange, PhD, is Professor in the Department of Psychiatry and Behavioral Neuroscience and Director of the Eating Disorders Program at the University of Chicago. He trained at the Institute of Psychiatry, University of London, and was a member of the team at the Maudsley Hospital in London that developed family-based treatment for anorexia nervosa. He is the author of numerous research publications and received a National Institute of Mental Health (NIMH) Early Career Development Award. Dr. Le Grange is currently principal investigator for studies on treatment of both bulimia nervosa and anorexia nervosa.

James Lock, MD, PhD is a child psychiatrist and Professor of Child Psychiatry and Pediatrics in the Division of Child and Adolescent Psychiatry and Child Development, Department of Psychiatry and Behavioral Sciences, Stanford University. He is the director of the Eating Disorders Program in the Division of Child Psychiatry and psychiatric director of an inpatient eating disorder program for children and adolescents at Lucile Salter Packard Children’s Hospital at Stanford. The author of

1 Resident doctor in Child and Adolescent Psychiatry, Child and Adolescent Psychiatry Department, “Prof. Dr. Al. Obregia” Psychiatry Hospital, Bucharest
numerous scientific publications on eating disorders in youth, Dr. Lock is a recipient of the Price Family Foundation Award for Research Excellence from the National Eating Disorder Association, an NIMH Early Career Development Award, and an NIMH Mid-Career Development Award.

The book is structured in 7 parts: Part I Etiology and Neurobiology, Part II Epidemiology and course, Part III Diagnosis and classification, Part IV Medical issues and assessment, Part V Treatment, Part VI Prevention, Part VII The role of parents.

Bringing together leading authorities, this comprehensive volume integrates the best current knowledge and treatment approaches for eating disorders in children and adolescents. The book reveals how anorexia nervosa, bulimia nervosa, and other disorders present differently developmentally and explains their potentially far-reaching impact on psychological, physical, and neurobiological development. It provides guidelines for developmentally sound assessment and diagnosis, with attention to assessment challenges unique to this population. Detailed descriptions of evidence-based therapies are illustrated with vivid case examples. Promising directions in prevention are also addressed. A special chapter offers a parent's perspective on family treatment.

No previous book has addressed this subject in such detail. The 25 chapters, written by leaders in the field, provide a comprehensive, scholarly, and clinically useful review of all major topics pertaining to individuals with eating disorders in this age group.

Eating disorders in childhood and adolescence have been quite neglected, despite the fact that the majority of eating disorders begin at this time. This book pulls together what is known about causation, consequences, and treatment. It provides essential knowledge not only for treating this population, but also for better understanding eating disorders in adults.
